

iS3's STOPzilla Anti-Spyware Awarded West Coast Labs' Checkmark Certification

BOYNTON BEACH, FL, October 7, 2008 – iS3 today announced that it has earned the Checkmark Certification for Anti-Spyware Installed from West Coast Labs, one of the world's foremost independent test laboratories. This certification applies to version 5.0 of STOPzilla Anti-Spyware, the company's flagship product.

For a product to be accredited to the Checkmark Anti-Spyware Installed certification, the desktop product must be able to nullify all installed and active Spyware in the Checkmark test suite current at the time of testing which is performed against unpatched Windows workstations, each of which is pre-infected with up to 60 distinct items of Spyware including Keyloggers, Password Stealers, Downloaders, Backdoors, Financials and Proxies.

"West Coast Labs' rigorous testing process and sterling reputation sends an absolutely clear and impartial message," noted Robert Scaduto, President of iS3. "Our subscribers can trust STOPzilla to provide them with superior protection against online threats of all types."

"West Coast Labs developed the Anti-Spyware Installed certification because we recognize the importance of a product's ability to restore a system to full working order after an infection has occurred," commented Michael Parsons, Senior Test Engineer at West Coast Labs. "The spyware used in this test is representative of all the various types of such malware included in our full collection of spyware, including backdoors, downloaders, keyloggers and stealers of financial information, among others."

About iS3

Since 2002, STOPzilla's CNET award-winning technology and ease of use continues to raise the standard in computer security. It has protected millions of users in more than 60 countries. STOPzilla's proprietary technology and free, unlimited customer support has garnered a high level of customer satisfaction, a growing subscriber base and solid long-term relationships with retail partners and online affiliates. Building on the success of STOPzilla, iS3 is launching a comprehensive suite of security products throughout 2009.
